

BRUSH-PROTECTED TRANSPORT RACKS

Different glass. Different handling needs.

A purpose-built range for protecting, organizing and moving IG units and flat glass safely through the workshop.

UNIQUE FEATURES

Protect every panel. Improve every movement.

Glass moves through multiple production steps before it is ready for delivery or installation. Deltarack keeps IG units and flat glass protected, organized and directly accessible between each step.

Side brush protection

Side brushes help protect sensitive glass surfaces from hard contact points, while the grooved HMPE 1000 base provides durable support and positioning at floor level.

Direct access to every panel

Each panel or IG unit has its own position, so there is no need to unload an entire stack to reach the glass you need.

Brush configurations for IG & Flat Glass

Two brush configurations match different glass thicknesses: wider positioning for IG units and closer positioning for flat glass.

Durable HMPE 1000 base

A hard-wearing HMPE 1000 base is designed for repetitive loading and unloading while providing durable support at floor level.

CONFIGURATION MATRIX

Choose the right configuration

Four purpose-built configurations for IG and Flat Glass, each available in a standard or high version. White brush positions are tuned to the intended glass type, with mobility options for different production flows.

Standard
W= 110 cm, L= 150 cm, H= 110 cm

IG Glass

Insulated / double glazing
29 slots

STANDARD CONFIGURATION

IG Glass Standard

Standard-height rack for insulated glass units and ergonomic loading.

- Brush positioning for IG thicknesses
- Direct access to every unit
- Standard height

Flat glass

Mirrors, doors, monolithic glass, ...
45 slots

STANDARD CONFIGURATION

Flat Glass Standard

Standard-height rack for mirrors, doors and flat glass components.

- Closer brush positioning for flat glass
- Direct access to every pane
- Standard height

High
W= 110 cm, L= 150 cm, H= 155 cm

HIGH CONFIGURATION

IG Glass High

High configuration for IG workflows requiring additional vertical support.

- Brush positioning for IG thicknesses
- Additional brush level
- High configuration

HIGH CONFIGURATION

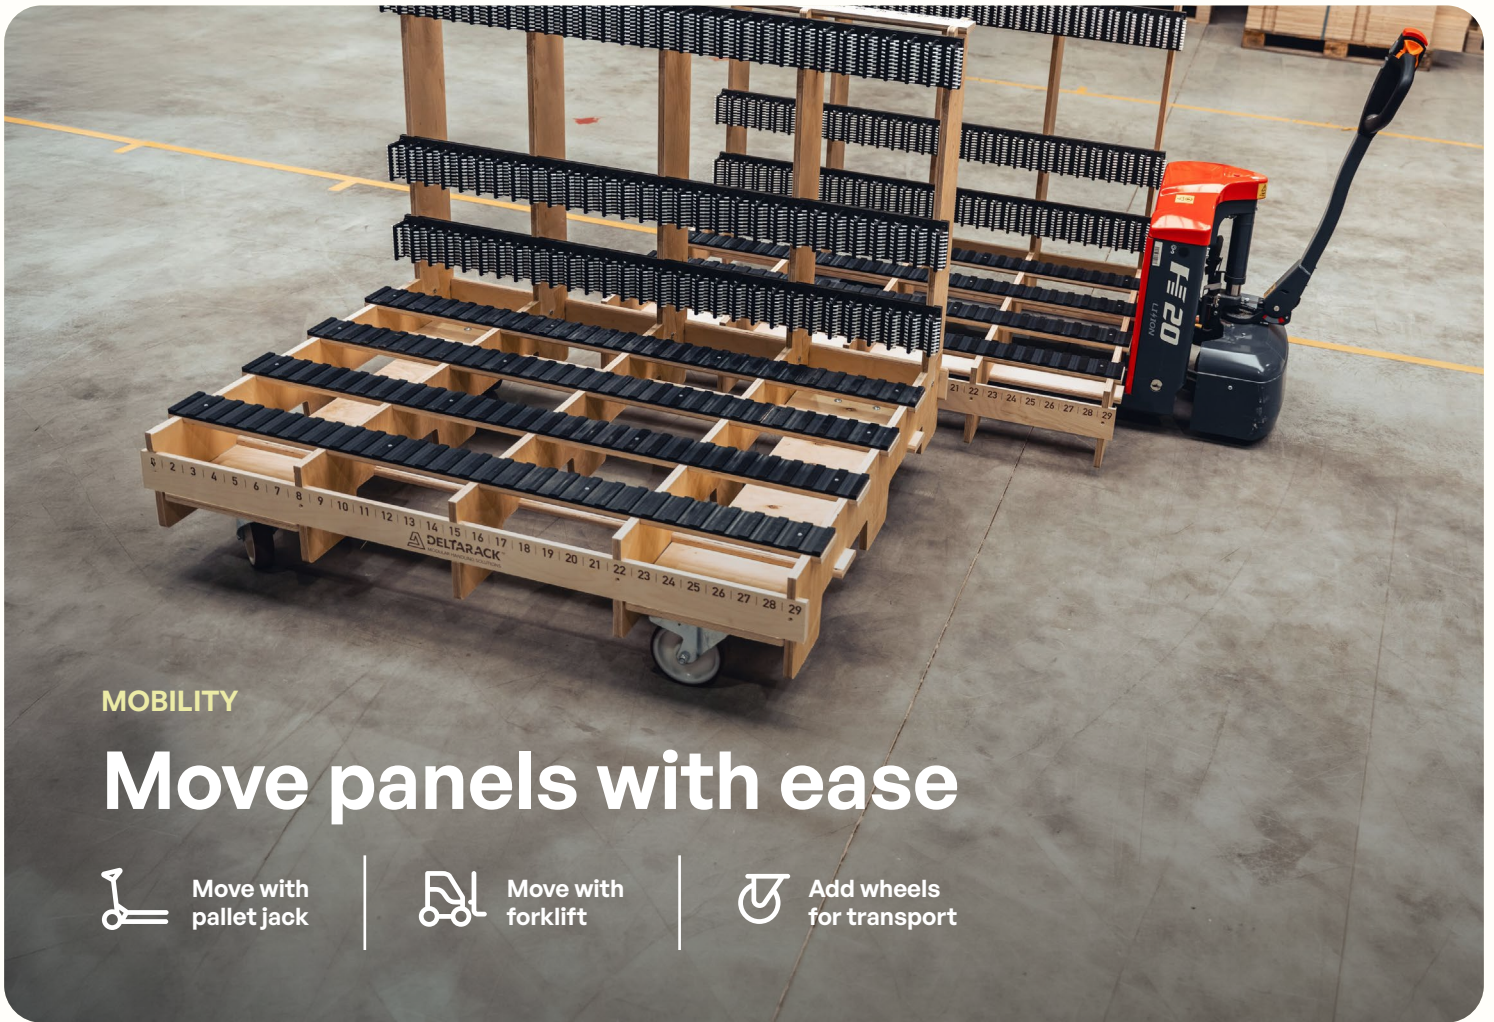

Flat Glass High

High configuration for taller flat glass and project components.

- Closer brush positioning for flat glass
- Additional brush level
- High configuration

All racks include

- White brush protection
- Durable HMPE 1000 base
- Modular assembly
- Standard and high versions
- Pallet jack and forklift access
- Optional wheels for transport

MOBILITY

Move panels with ease

Move with
pallet jack

Move with
forklift

Add wheels
for transport

SELECTION GUIDE

Which glass type do you handle?

IG Glass

Flat Glass

Do you need the high version?

Do you need the high version?

Yes

IG High

No

IG Standard

Yes

Flat Glass High

No

Flat Glass Standard
